Risk and Limitations

All our test panels should not replace professional medical advice, assistance, diagnosis, or treatment. It is essential to consult with your healthcare provider, who will evaluate your results in conjunction with your medical history, signs and symptoms, medications, and other test results. Test results should be considered as one component of a healthcare provider's comprehensive clinical assessment.

Food Allergy Panel reports the presence of IgE(s) antibodies, but the result by itself cannot confirm the diagnosis of an allergy. It's important to follow up with your healthcare provider. They will review your results along with your medical history, signs and symptoms, medications, and any other test results. Only a healthcare provider can diagnose an allergy and prescribe medication, if needed.

Vibrant America has effective procedures to protect against technical, operational problems and other potential factors; however, such issues may still occur. As with all medical laboratory testing, there is a small chance that the laboratory could report incorrect results. Vibrant may re-test a sample to obtain these results, but even upon re-testing, the results may not be obtained. Individuals may wish to pursue further testing to verify any results.

Vibrant America does not claim that its tests are intended for therapeutic purposes or extend beyond the scope of Manufacturers claims of FDA-cleared or approved tests. The reports and information provided by Vibrant America are not intended as medical advice and should not be used as a substitute for professional medical consultation. Please consult your healthcare practitioner for questions regarding test results or before beginning any course of medication, supplementation, or dietary changes.
